string theory is our current best candidate for the unification of all fundamental forces including gravity in a consistent quantum

framework in this collection of lectures delivered at the cargèse summer school string theory from gauge interactions to cosmology world leading experts provide an up to date survey of the latest developments in this topic including the gauge gravity correspondence superstring cosmology and cosmic strings topological string theory and matrix models physics beyond the standard model and the landscape of vacua of string theory conformal field theory and critical phenomena in statistical mechanics many more topics are also discussed in shorter contributions by school participants written with an emphasis on pedagogy this volume will be a invaluable resource to students and experts alike

publisher description

this book is written in a pedagogical style intelligible for graduate students it reviews recent progress in black hole and wormhole theory and in mathematical cosmology within the framework of einstein s field equations and beyond including quantum effects this collection of essays written by leading scientists of long standing reputation should become an indispensable source for future research

this volume contains a series of topical lectures in general relativity cosmology astrophysics and field theory with contributions from theorists and experimentalists

the papers in this volume examine the recent revolutionary discoveries in cosmology and astronomy and their theoretical interpretation the observational evidence for an accelerating universe and an earlier decelerating phase is brought up to date with the newest results for the most distant and oldest type ia supernovae the data from the wmap satellite provide for the first time true precision cosmology reliable results for the age of the universe its geometry its evolution over the past 13 7 billion years and many other features including the proportions of ordinary matter dark matter and dark energy other papers in this volume describe the information obtained with 21st century astronomical techniques including gravitational lensing studies across the electromagnetic spectrum with ground based and nasa observatories and surveys of millions of galaxies the results are interpreted by leading theorists using both accepted and exotic theories including inflation and superstring theory

this companion includes over 350 entries extensively cross referenced describing the modern view of cosmology including both theoretical ideas and the many strands of observational evidence

from the reviews it survives the pitfalls of this fashion conscious era by pursuing a rigorously independent minded attitude to contemporary ideas the level is introductory undergraduate with rather little mathematics but a strong physical basis the second part on general relativity and cosmology provides a good account of modern theoretical ideas from rotating black holes to grand unified theories and inflation the third part is an excellent and profound discussion of the fundamental problems of cosmology for anyone with a philosophical turn of mind this section alone makes the book essential reading nature
